WHO WE ARE

About Us

M3G Farm Limited is an agribusiness company focused on sustainable crop and livestock production, high-yield forage cultivation, and agro processing. From its base in Abuja, Nigeria, the company is building a modern agricultural enterprise that supports food security, livestock feed supply, and renewable energy through responsibly managed charcoal woodlots.

The company's core operations revolve around commercial cultivation of premium grasses such as Juncao, Mombasa, Napier and Alfalfa, alongside managed tree plantations for charcoal. These enterprises are integrated into a broader agribusiness strategy covering crop production, livestock farming, agro processing and agribusiness development.

AT A GLANCE

4

Core business focus areas

Abuja, FCT

Head office location

Grasses & trees

Juncao, Mombasa, Napier, Alfalfa + charcoal woodlots

Integrated model

Crop, livestock, agro-processing & biomass

WHERE WE'RE HEADED

Vision & Mission

V Vision

To become a leading and trusted provider of sustainable forage, livestock feed and agro products in Nigeria and West Africa, using innovation to grow today and feed tomorrow.

M Mission

- Produce high-quality grasses and forage to support intensive and semi-intensive livestock systems.
- Develop commercially viable, environmentally responsible tree plantations for charcoal and biomass.
- Add value through agro processing, advisory services and agribusiness development.

WHAT WE DO

Business Focus Areas

1

Forage & Grass Production

Production of high-quality forage grasses and fodder crops designed to support efficient and sustainable livestock production.

2

Livestock Farming

Ruminant production (cattle, sheep, goats) supported by intensive forage systems and conserved feed.

3

Agro Processing

Processing fresh forage and crop products into silage, hay, feed mixes and other value-added products.

4

Agribusiness Development

Project development, technical advisory and partnership models for investors, cooperatives and institutions.

Juncao Grass

Juncao grass is at the heart of M3G's forage strategy — a fast-growing, high-biomass grass suitable for green feed, silage and biomass production.

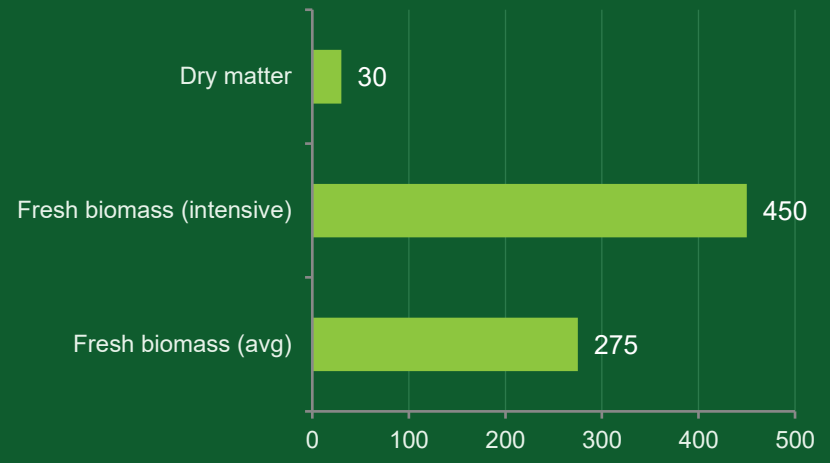

KEY CHARACTERISTICS

- High fresh biomass production per hectare
- Multiple harvests per year once established
- Suitable for feeding cattle, sheep and goats, and for use as biomass

M3G FARM LIMITED FOCUSES ON

- Site selection and soil preparation for Juncao establishment
- Scheduled cutting (every 2–3 months) to maximize annual yield
- Integration into silage and zero-grazing systems

INDICATIVE PRODUCTION POTENTIAL

With proper soil fertility, water management and timely cutting, one hectare of Juncao can support roughly 20 cows or 200 goats per year.

Mombasa & Napier Grass

Mombasa Grass

Panicum maximum cv. Mombasa — a high-yield tropical grass widely used in intensive grazing and cut-and-carry systems.

M3G's programme offers:

- Establishment of Mombasa pastures for dairy and beef
- Rotational grazing design for vigour and performance
- Cut-and-carry systems for smallholder and peri-urban farms
- Good palatability, strong regrowth, suited to silage and hay

Napier Grass

Elephant grass remains one of the most popular tropical forages for intensive feed systems.

M3G Farm Limited provides:

- Planting materials and technical support for establishment
- Design of zero-grazing units for stall-fed chopped Napier
- Training on chopping, mixing and feeding techniques
- High green matter yield, responsive to fertilization & irrigation

Alfalfa & Trees for Charcoal

Alfalfa Grass

A high-protein forage that can significantly improve ration quality when integrated into feed systems.

M3G's approach:

- Pilot plots in areas with better drainage and moderate temperatures
- Use of alfalfa hay and pellets to balance energy-rich rations
- Targeted supply to dairy, breeding and high-performance farms
- High protein content and good digestibility

Trees for Charcoal & Biomass

M3G Farm Limited is developing managed tree plantations for charcoal and biomass production.

Key aspects & target markets:

- Fast-growing tree species suited to Nigerian conditions
- Block and strip planting for easy harvesting and replanting
- Sustainable cutting cycles with minimal forest impact
- Domestic, industrial and export-oriented markets

WHY M3G

Competitive Advantages

1

High-Yield Forage Expertise

Practical knowledge of Juncao, Mombasa, Napier and Alfalfa systems.

2

Integrated Model

Combination of crop, livestock, agro processing and biomass generation.

3

Strategic Location

Operations anchored in Abuja, enabling access to national markets and policy institutions.

4

Technical Partnerships

Ability to collaborate with agronomists, nutritionists and project developers.

Sustainability Emphasis

Managed plantations and soil-friendly practices to reduce environmental impact.

LEADERSHIP

Governance & Management

M3G Farm Limited is guided by a board of directors and a management team that bring experience in architecture, business, public service and agribusiness.

WORKING TOGETHER

Collaborations & Partnership Opportunities

Current Collaborations

- Manchong Integrated Farms Limited
- Yerwa Meat Processing Factory Limited
- Dunoma Ventures Limited, among others

M3G Farm Limited welcomes partnerships with:

- Investors seeking exposure to scalable agribusiness
- Development agencies implementing agri-transformation projects
- Reliable off-takers for feed and biomass supply
- Farmers & cooperatives for out-grower schemes

Available Models

1. Joint ventures for large-scale Juncao and tree plantations
2. Contract production of forage for specific livestock operations
3. Lease or management agreements for underutilized land
4. Technical advisory and training contracts
